CPR

Cardiopulmonary resuscitation (CPR) is a lifesaving technique useful in many emergencies, including heart attack or near drowning, in which someone's breathing or heartbeat has stopped.

AED

An automated external defibrillator (AED) is a portable device that checks the heart rhythm and can send an electric shock to the heart to try to restore a normal rhythm.

First Aid

Assistance given to any person suffering a sudden illness or injury, with care provided to preserve life, prevent the condition from worsening, and/or promote recovery.

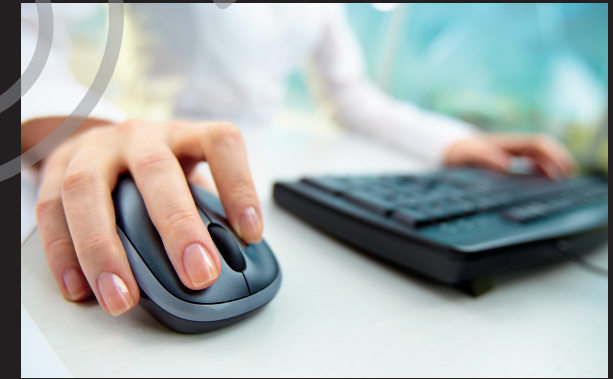

ACLS

Advanced courses in airway management, pharmacology, rhythm identification, and practical application for healthcare providers, first responders, and critical care team members.

PALS

Advanced courses in pediatric management of arrhythmia, respiratory, and shock emergencies, and systematic assessment for healthcare providers, first responders, and critical care team members.

Online Courses

AHA Blended Learning courses combine the flexibility of online training with in person skills practice and testing.

ADVANCED CARDIOVASCULAR LIFE SUPPORT (ACLS)

This advanced course highlights the importance of high-performance team dynamics and communication, systems of care, recognition and intervention of cardiopulmonary arrest, immediate post-cardiac arrest, acute dysrhythmia, stroke, and acute coronary syndromes (ACS).

BASIC LIFE SUPPORT (BLS) COURSE

Basic Life Support training reinforces healthcare professionals' understanding of the importance of early CPR and defibrillation, basic steps of performing CPR, relieving choking, and using an AED; and the role of each link in the Chain of Survival.

HEARTSAVER & FIRST AID COURSES

Heartsaver courses are designed for anyone with little or no medical training who needs a course completion card for a job, regulatory (for example, OSHA), or other requirements. These courses can also be taken by anyone who wants to be prepared for an emergency in any setting. The First Aid course can be added and teaches students first aid actions for medical emergencies and skills for handling injury and environmental emergencies, including external bleeding, broken bones and sprains, and bites and stings.

PEDIATRIC ADVANCED LIFE SUPPORT (PALS)

This advanced pediatric course uses a series of simulated pediatric emergencies to reinforce the important concepts of a systematic approach to pediatric assessment, basic life support, PALS treatment algorithms, effective resuscitation and team dynamics.

BLOODBORNE PATHOGENS (BBP) TRAINING

The BBP course teaches students how to protect themselves and others from being exposed to blood or blood-containing materials. This course is designed to meet Occupational Safety and Health Administration (OSHA) requirements.
